Modular Guidance System™

Safe driver navigation

Carsonite's Modular Guidance System™ is designed to block blinding headlight glare from opposing traffic lanes. This anti-glare screen comes with a base rail system that allows quick installation, limiting the amount of time workers spend installing the system. The base rail units come pre-sized for 10, 12, 12.5 and 15 foot barriers. The blades, available in various heights, are adjustable up to 22 degrees to optimize cut-off angle. In addition, Carsonite's MGS prevents motorists from impeding traffic flow by gawking into construction zones. The system efficiently and safely guides motorists through the zone.
